March Compact 1.5x-15x42 SFP Rifle scope

New light weight and compact 1.5-15x42 riflescope is equally ideal for hunting and for precision semi-auto platforms. 42mm objective lens produces excellent low light performance in a compact form factor, while 1.5x low end magnification together with a day bright illuminated dot makes for very fast target acquisition.

15x top magnification makes it a perfect choice for NRA's new Mid-Range Tactical Rifle competitions.
