

**Dual
Reticle**

Specifications

Model Number	D10SV24FIML [D10SV24FIMLN]*
Magnification	1x-10x
Objective Lens Diameter	24mm
Exit Pupil	8.6mm(1x)-2.4mm(10x)
Eye Relief	72mm-104mm
Real Field of View (100m)	34m(1x)-3.4m(10x)
Focus	10yd - ∞
Turrets	Tactical [Capped]*
1 Click Adjustment	0.1MIL
1 Turn Travel	10MIL
Elevation / Windage Travel Amount	±28MIL
Reticle	DR-1**
Illumination	6 level
Length	214mm (8.4inch)
Body Tube Diameter	30mm
Weight	505g (17.8oz)
Included Items	Flip caps (Objective lens, Eyepiece) / Fast lever Battery (CR2032) / Lens cloth / Hex key
Warranty	10 years

*Bra-ket[] indicates the normal turrets (capped turrets) model.

**Image displacement due to zooming conforms to ISO 14135-2:2017.

March Dual Reticle

Best of both reticles

The newest March Dual Reticle has advantages of both SFP and FFP reticle. It has the convenience of the FFP reticle scale which magnifies and reduces according to the magnification and the usability of the SFP reticle with the constant thickness of the line as the magnification changes.

Placing the bright fiber dot illumination to the Second Focal plane reticle ensures that the illuminated dot is usable across the entire magnification range; from a dot sight at low magnifications to a precise illuminated dot for long range precision shooting at higher magnifications with the use of the scale.

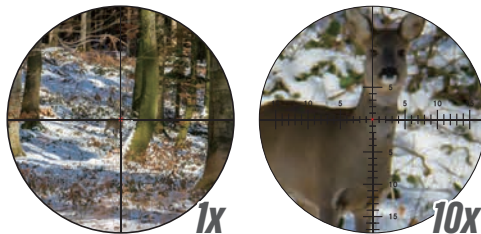

Actual Size

True 1x & High Magnification Ratio

Wide range of use

This scope can be used just like a dot-sight with both eyes open for point blank range since it's a true 1x scope. With its 10-fold zoom ratio, it can also be used for long range precision shooting. This scope does it all.

Ultra Compact & Light

Same as a 500ml bottle

The size and the weight are about the same as a 500ml plastic bottle. The length is 214mm (\approx 8.4inch), the weight is 505g (\approx 17.8oz). This ultra compact scope is suitable for tactical shooting and hunting. Special 1x-10x24mm Shorty unimount (manufactured by AUDERE, coming soon) or 2 piece mount rings can be used.

Fast Focus Eyepiece

Quickly adjust to your eye

The diopter adjustment mechanism has been improved so you can adjust the eyepiece to your eye faster than ever before. When you have it adjusted to get the best, crispest view of the reticle, simply rotate the locking ring and secure the eyepiece just like in our earlier models.
