

8-80x56 High Master Wide Angle Majesta scope

Product page: <https://marchscopes.com/scopes/d80hv56wtixgr/>

We made new reticles especially for the 25 degrees wide angle 8-80x56 High Master scope. One of them is the MTR-WFD reticle designed for F Class shooting discipline. Please note that this reticle is mainly designed for F class Long Range matches being held in the USA. Specifically on the ICFRA Long range 1000 yard target. This may match up also for use in many other countries. But we are aware there are many variations in both Metric and Imperial size of official F Class targets and other differences in short range F class targets which are being used around the world. Please check to ensure this could match with the targets that you shoot F class with beforehand. You can learn more about the MTR-WFD reticle from the links below.
